

Parma Nand Thakur

Resume Analysis Report

72

out of 100

Moderate Match

Overview

Parma is a backend-leaning full-stack developer with 3+ years at Capgemini in capital markets. His resume demonstrates strong Java/Spring Boot ownership and measurable impact (70% manual effort reduction, 30% load time improvement). To break into AI/ML engineering roles, he should surface his GenAI and LLM work more prominently and add depth to ML fundamentals.

✓ Strengths

- Quantified achievements (70% effort reduction, 50% productivity gain)
- Capital markets domain experience — valued in fintech AI roles
- Full-stack breadth: Java, Spring Boot, React.js, PostgreSQL
- CI/CD, Microservices, and AWS fundamentals in skills section
- Clean project descriptions with clear tech stack attribution

■ Areas to Improve

- GenAI/LLM work at Capgemini is completely absent — add it
- Executive summary still says 'Java Full Stack Developer'; update to AI/ML Engineer
- No mention of RAG pipelines, LangChain, Qdrant, or fine-tuning work
- Projects section has no AI/ML projects — add Resume Intelligence Platform
- Skills section missing: Python, LangChain, HuggingFace, FastAPI, Docker

Missing Keywords / Skills

- Python
- LangChain
- RAG
- LLM fine-tuning
- FastAPI
- Docker
- HuggingFace
- Vector Database
- Qdrant
- NLP
- Prompt Engineering
- Transformers

- FAISS / ChromaDB

ATS Optimisation Tips

- Replace 'Senior Software Engineer' title with 'AI/ML Engineer' or 'GenAI Engineer'
- Add a dedicated 'AI / ML' skills sub-section above Java skills
- Use keywords from JD verbatim: 'retrieval-augmented generation', 'embedding models'
- Move education after experience (you have 3+ years XP, lead with impact)
- Add GitHub links to your AI portfolio projects (ai-engineer-journey repo)

Recommended Job Roles

GenAI Engineer | AI/ML Engineer | Applied AI Engineer | LLM Engineer | Backend Engineer (AI Products)
